Subject : Routine and Exceptional Maintenance of EDF Cooling Towers

Aéro Solutions is a company based at Saint Dizier (Department 52 Haute Marne) specialising in the maintenance of cooling towers. In early 2017, Aéro Solutions was awarded a routine maintenance contract for approximately half of the EDF nationwide cooling tower heat exchangers. EDF also attributed to Aéro Solutions a contract for the renovation of 22,000 cubic metres of thermal insulation material on the heat exchanger of reactor 2 of the Dampierre-en-Burly nuclear power station. The implementation has been divided into 2 programmed phases, the first in 2016, and the second shortly to begin in 2018.

As of today, Aéro Solutions is a diligent company and can be considered as a conscientious maintenance contractor to be recommended for all and any maintenance work concerning heat exchangers and cooling towers.
